VISION ON SOL (VOS) — TOKENOMICS FRAMEWORK V1.0

Abstract

The following document outlines the advanced tokenomic strategy for Vision On Sol (VOS), a community-driven crypto-asset designed to function as both a motivational symbol and decentralized coordination tool. The VOS token is engineered to maintain memetic virality, narrative velocity, and economic integrity through staged release mechanics, asymptotic burn logic, and price-contingent behavioral incentives. Allocation is fixed, and the economic framework is governed by both linear and nonlinear dynamics to maintain systemic resilience in volatile market regimes.

Total Supply

Total Token Supply: 1,000,000,000 $VOS (fixed)

-

  No mint function

-
-

  Immutable supply cap

-
-

  Zero pre-mine, zero VC allocation

-

Allocation Breakdown

Category	Allocation	Vesting / Unlock Conditions
Public Launch (Pump.fun)	91.18%	Unlocked at launch
Developer Allocation	3.82%	Locked 6 months; 1-year linear vesting post-unlock
Ecosystem Growth	2.5%	Used for incentivizing community-led tools and

| | reels | |
| Treasury (DAO Reserve) | 2.5% | Controlled by VisionDAO; multisig with community signers |

Note: All allocations are transparently viewable on-chain. Multisig addresses and vesting contracts to be published with community audit.

Price-Triggered Milestone Matrix

The VOS protocol uses a discrete stage-gated release system where operational upgrades and narrative expansions are triggered by achieving target market valuations.

Price Milestone (USD)	Triggered Event
$0.001	Activation of Motivation Vaults (Merch + Airdrops unlocked)
$0.005	Launch of BUILDZONE (AI-assisted co-creation platform)
$0.01	Commencement of influencer marketing campaigns + motivational docuseries teaser
$0.025	IRL meetups announced (DUBAI confirmed, NYC pending logistics)
$0.05	NFT Collection Mint ("VISIONARY BEASTS" Phase 1)
$0.10	Binance + Tier 1 CEX application packages sent + DAO proposal for burn protocol (we will keep posting)
$0.25	Launch of $VISION governance token + new stealth protocol (Q1 2026)
$1.00	Full-scale media blitz, cross-chain deployment (Base + Arbitrum), and VOS Academy

Each milestone is accompanied by on-chain voting to ratify implementation.

Strategic Treasury Deployment

In order to reach above milestones and achieve self-sustaining flywheel dynamics, the VOS core contributors and DAO will deploy a strategically capped marketing + development investment totaling:

$720,000 USD equivalent over 12 months, allocated as follows:

Category	% of Budget	Notes
Content Creation	25%	Video reels, motivational branding, cross-platform

		ads
Development & Audit	20%	Smart contract security, staking vaults, frontend upgrades
Paid Listings	15%	CG, CMC, CEX onboarding
IRL Activations	10%	Events, merch shipping, venue partnerships
Community Incentives	15%	Rewards, bounties, token airdrops
Treasury Buffer	15%	Unallocated, DAO-controlled emergency buffer

All treasury movements are to be published via on-chain dashboards and monitored by community delegates.

Note: As part of our persistent brand expansion strategy, the VOS team will continue posting daily motivational content, reels, and community updates until we are listed on multiple Tier 1 centralized exchanges. Visibility is non-negotiable.

Burn Dynamics (Elastic Deflationary Feedback System)

Beginning in Q4 2025, VOS will initiate a burn protocol governed by:

-

  Volume-based elastic triggers (VETs)

-
-

  Token velocity decay formulas (TVDF)

-
-

  DAO-ratified burn windows

-

Model: When 7D average transaction volume exceeds a moving threshold (determined via sigmoid curve indexing), a portion of Treasury + Ecosystem tokens are auto-burned at random intervals within a DAO-defined window.

Governance Economics

The eventual fork of $VOS into $VISION (governance key) is projected at the $0.25 price milestone. Holders of locked $VOS will be eligible for $VISION via a 1:1 bonding curve, with quadratic weight voting used to modulate:

-

Milestone pacing

-
-

New protocol funding

-
-

Grant initiatives

-
-

Future supply shocks

-

Closing

This tokenomics design is a blend of memetic engineering, builder-centric allocation theory, and non-linear game theory. It's not made for average investors. It's made for those who build, believe, and refuse to settle.

Welcome to the movement. Own the Vision.
